01

What is Hypertension?

Blood pressure is the measurement of force applied to artery walls

What is Hypertension?

Hypertension is a medical condition in which the force of blood against the artery walls remains consistently high.

Over time, this increased pressure can damage blood vessels and vital organs such as the heart, brain, and kidneys.

02

What causes Hypertension?

What causes Hypertension?

Family history

Obesity

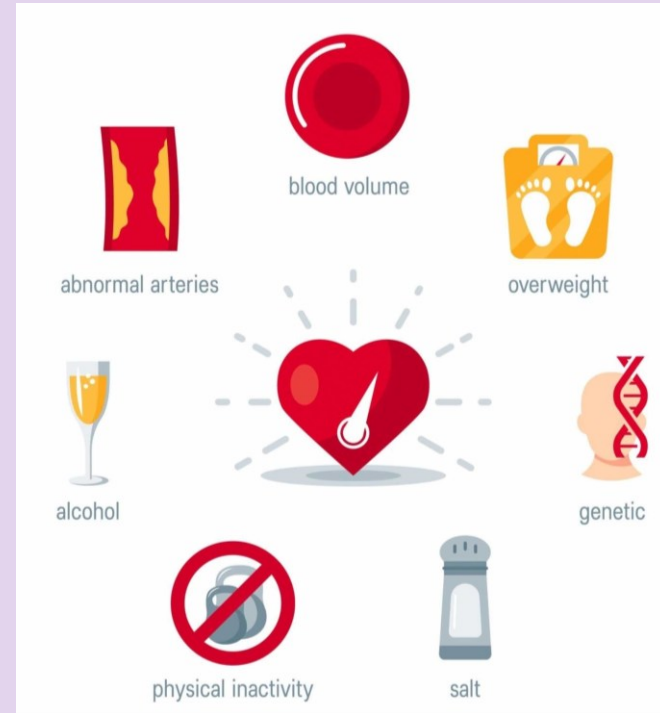

High salt intake

Lack of physical activity

Smoking

What causes Hypertension?

Excessive Alcohol Consumption

Chronic Stress

Kidney Disease

Diabetes

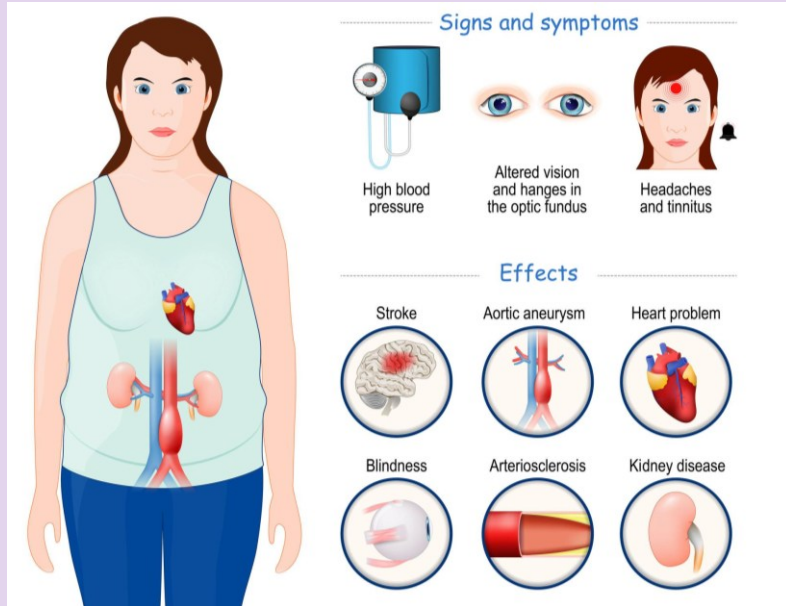

Aging

03

Signs and Symptoms

Signs and Symptoms

Headaches

Dizziness

Blurred vision

Shortness of breath

Signs and Symptoms

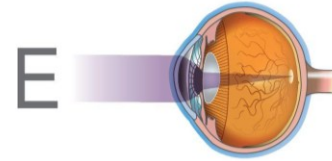

Chest pain

Fatigue

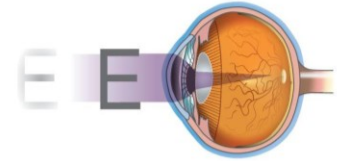

Nosebleeds (in severe cases)

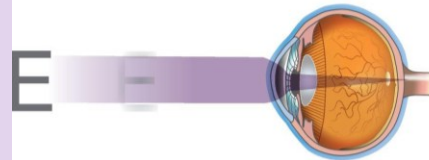

Normal Vision

Normal vision, often called "20/20" vision means that you can see clearly objects that are 20 feet.

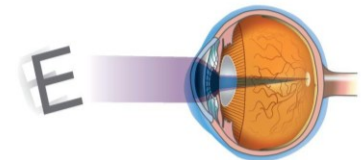

Myopia Vision

Myopia vision, often known as "being short sighted" causes your vision to be blurry in the distance but clearer when looking at things up close.

Farsightedness / Hyperopia Vision

Farsightedness, or hyperopia, as it is medically termed, is a vision condition in which distant objects can be seen clearly.

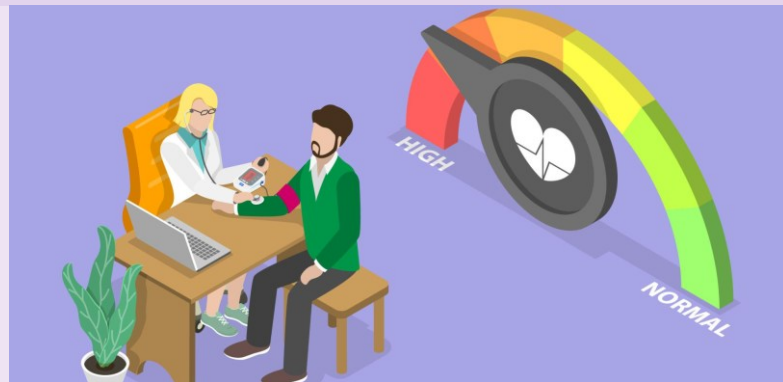

Astigmatism Vision

Astigmatism vision, is a common vision condition that causes blurred vision. It occurs when the cornea (the clear front cover of the eye) is irregularly shaped or sometimes because of the curvature of the lens inside the eye.

04

Testing and Diagnosis

Testing and Diagnosis

**Sphygmomano
meter (Blood
Pressure Cuff)**

**Ambulatory
Blood Pressure
Monitoring**

Blood Tests

Testing and Diagnosis

**Electrocardiogram
(ECG)**

Echocardiogram

Urine Tests

05

Treatment

Treatment

**Healthy diet
(DASH diet)**

**Reduce salt
intake**

**Regular
exercise**

Stop smoking

**Limit alcohol
consumption**

**Maintain
healthy weight**

**Manage
stress**

Lifestyle Changes

Treatment

ACE inhibitors

**Calcium channel
blockers**

ARBs

**Beta-
blockers**

Diuretics

Medications

06

Prognosis

Prognosis (With Treatment)

Reduced risk of heart attack

Reduced risk of stroke

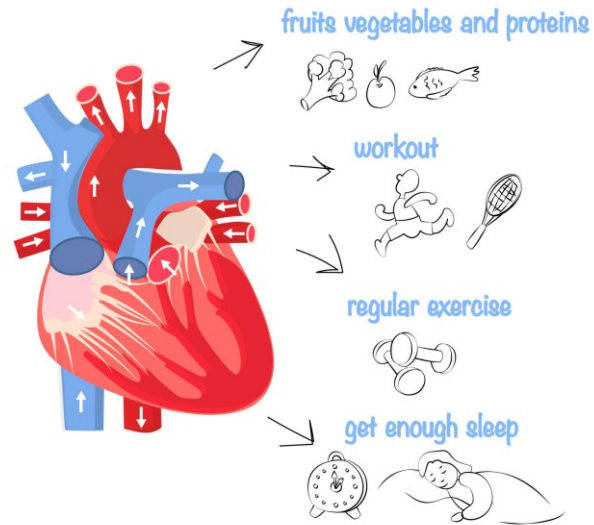

Better kidney health

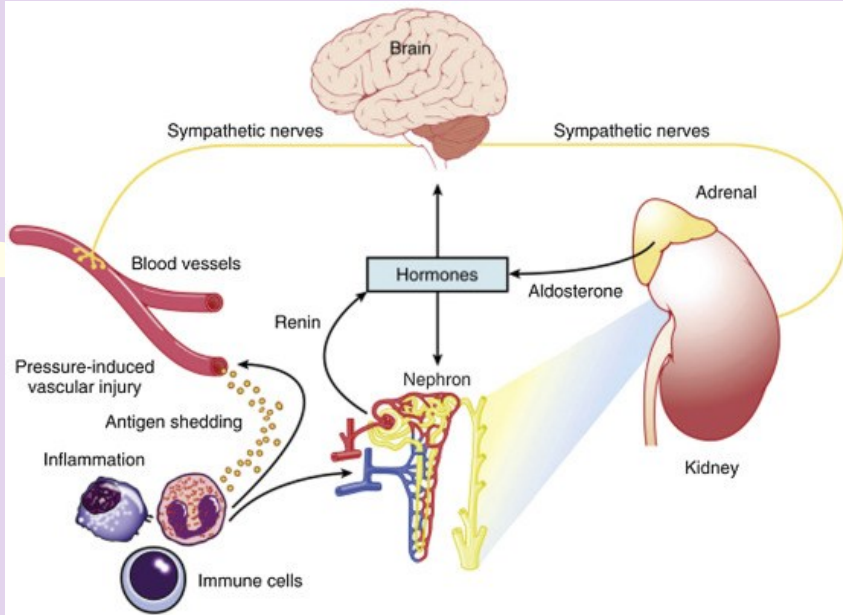

Longer life expectancy

FOR A HEALTHY HEART

Prognosis (Without Treatment)

Heart disease

Stroke

Kidney failure

Vision problems

Heart failure

Thank You!
